

Reading Strategies

Connect two

In this activity students pair up and select two words from a list to find either the similarities or differences between them. This promotes higher order thinking by allowing students to find the connections between terms and relate them using prior knowledge.

For instance:

Students could construct a new understanding using new and old math terms provided:

Congruency

Angles

Sides

Right Triangle

1) Right Triangle & Angles: All triangles are made up of 180 degrees and right triangles have one 90 degree angle.
